

“Hospital environment maintenance and study - Industry-university co-operation, learned society, overseas inspection.

We make researches on environment maintenance from various aspects, and we avoid implementation of uniformity in our service methods but always establish a challenging goal to achieve for this purpose, we positively attend conferences to find the most suitable partners and promote the industry-university cooperation study to realize a better environmental maintenance. Furthermore, we research trends in this field through overseas inspections.

True Competitive Power

Industry-university co-operation, learned society and overseas inspections

We aim specialization of techniques and individual abilities in order to strengthen corporate competitiveness.

▶ A study to support techniques

A study to support techniques

Industry-university co-operation study of infection control in medical facilities

- * Scientific examinations and improvement of skills
- * “Network of support”

Overseas inspections

Making researches on viewpoints, methods of thinking, skills and trends that are not common in Japan.

▶ A study to improve motivation

Through visiting every site and communicating directly with employees by the president or the officials, we arrange an opportunity to think together about what is “comfortableness” that we could feel in everyday duties. And we promote employees to take action with the spirit of “awareness” that could emerge from the activities of direct communication and brainstorming.
